

Introduction to Performance Management using zVPS for Linux on z

- Barton@VelocitySoftware.com
- [HTTP://VelocitySoftware.com](http://VelocitySoftware.com)
- [HTTP://LinuxVM.com](http://LinuxVM.com)

“If you can’t Measure it,
I am Just Not Interested™”

- **Performance Management Overview**
- **Systems Management Features**
- **zVPS Objectives (and buzzwords)**
- **End to End Performance Management**
- **zVPS**
 - Data Collection
 - PDB
 - Technology
- **Applications**
- **zVPS Release Updates**

“z” Performance Management Level Set

- **SHARED resource environment,**
 - z/VM Performance critical (Wells Fargo runs their ATMs on Linux on Z)
 - Any server or application can impact other servers or applications
- **Linux is not z/OS**
 - No workload manager, workload prioritization is manual
- **This is not distributed Environment**
 - We do not have cycles to waste
 - We DO have capacity planning, chargeback requirements
 - We DO expect to run at very high utilization!
- **Tools are needed specific to the environment**
 - “end to end”

Performance Management “vendor” Requirements

- **Performance Management Business Requirements**
 - **Performance Analysis**
 - **Operational Alerts**
 - **Capacity Planning**
 - **Accounting/Charge back**
- **Correct data (Virtual Linux CPU data wrong)**
- **SMT CPU data difficult to understand**
- **Capture ratios (is the data valid?)**
- **Instrumentation can NOT be the performance problem**

Infrastructure Requirements: Performance Analysis

- **Why Performance Analysis: Service Level Mgmt**

- Diagnose problems real time
- Manage Shared resource environment
- Any application may impact other applications

- **Infrastructure Requirements**

- Analyze all z/VM Subsystems in detail, real time
 - (DASD, Cache, Storage, Paging, Processor, TCPIP)
- Analyze Linux
 - (applications, processes, processor, storage, swap)
- Historical view of same data important
 - **Why are things worse today than yesterday?**
 - **Did adding new workload affect overall throughput?**
 - **Know who/what is using resource and how to re-allocate**

Infrastructure Requirements: Capacity Planning

- **Why Capacity Planning: Future Service Levels**
 - How many more servers can you support with existing z14?
 - What is capacity requirements for an application?
 - **Avoid crises *in advance***
 - Consolidation Planning – Projecting requirements of the next 100 or 1000 servers
- **Infrastructure Requirements**
 - Performance database (long term)
 - z/VM **AND** Linux data
 - Resource requirements by Server, Application, User
 - z/VM and z/Linux data must be usable by existing planners
 - **Interface to MICS, MXG, TUAM, TDS, IUE (BMC)**

Infrastructure Requirements: Chargeback

- **Why Chargeback?**

- **How much does an application cost IT to operate?**
- Distributed chargeback model is by server
- Shared chargeback model is by resource utilized
- Convincing customers to move applications to “z”
- Encourages efficient/effective resource use
- Align IT to your business model

- **Infrastructure Requirements**

- Identify Resource by server
- Identify Resource by Linux Application
- **High capture ratio**
- Every site does it differently, so flexible data is key

Infrastructure Requirements: Operations

- **Operational Requirements**

- Operations will manage 100's (1000's) of servers
 - Requires active performance management
- Alerts for processes in loops, disks 90% full, missing processes
 - One test server in a loop impacts all other servers
- Fast problem detection
- Requires active performance management
- **Requires AUTOMATION! (zALERT!)**

- **Infrastructure Requirements**

- Interface to SNMP management console (NETCOOL, HPOpenView)
- User tailored alerts
- Web based alerts

zVPS does “End to End” Performance Management

- **Management wants**
 - “single pane of glass” - One tool that does all
- **Complete performance management includes:**
 - z/VM System Level: CEC, LPAR data, ALL SubSystems
 - VSE – partitions, CPU, I/O
 - Linux – Storage, CPU, file system, network
 - Process – applications, performance data
- **Network analysis**
- **Application subsystem analysis**
 - Java, WAS, Oracle, MQ, DB2
- **Outside “z” server analysis**
 - Linux on “x”, VMWare, KVM
 - Microsoft servers
 - VPN, gateways, utilities

zVPS Data Sources

- **Standard Interfaces mean less work**
 - Agentless
- **CP Monitor – z/VM**
 - LPAR data, CPU data
 - Disk, storage, paging data
 - Virtual machine data
 - Seeks data
- **SNMP – Standard (requires zTCP collector)**
 - Network data, microsoft servers, many appliances
 - VSE data
 - Linux “UCD” mib – high level ram, CPU
- **SNMP – Velocity Software mib**
 - Process details, applications, Java, WAS, Oracle

z/VM Performance monitor architecture

Traditional model (1989)

ESAMON/zMON: Real time analysis

- **Uses Standard CP Monitor**

Real Time Analysis

ESAMAP/zMAP: Performance Reporting

Post (midnight) Processing

Creates Long Term PDB

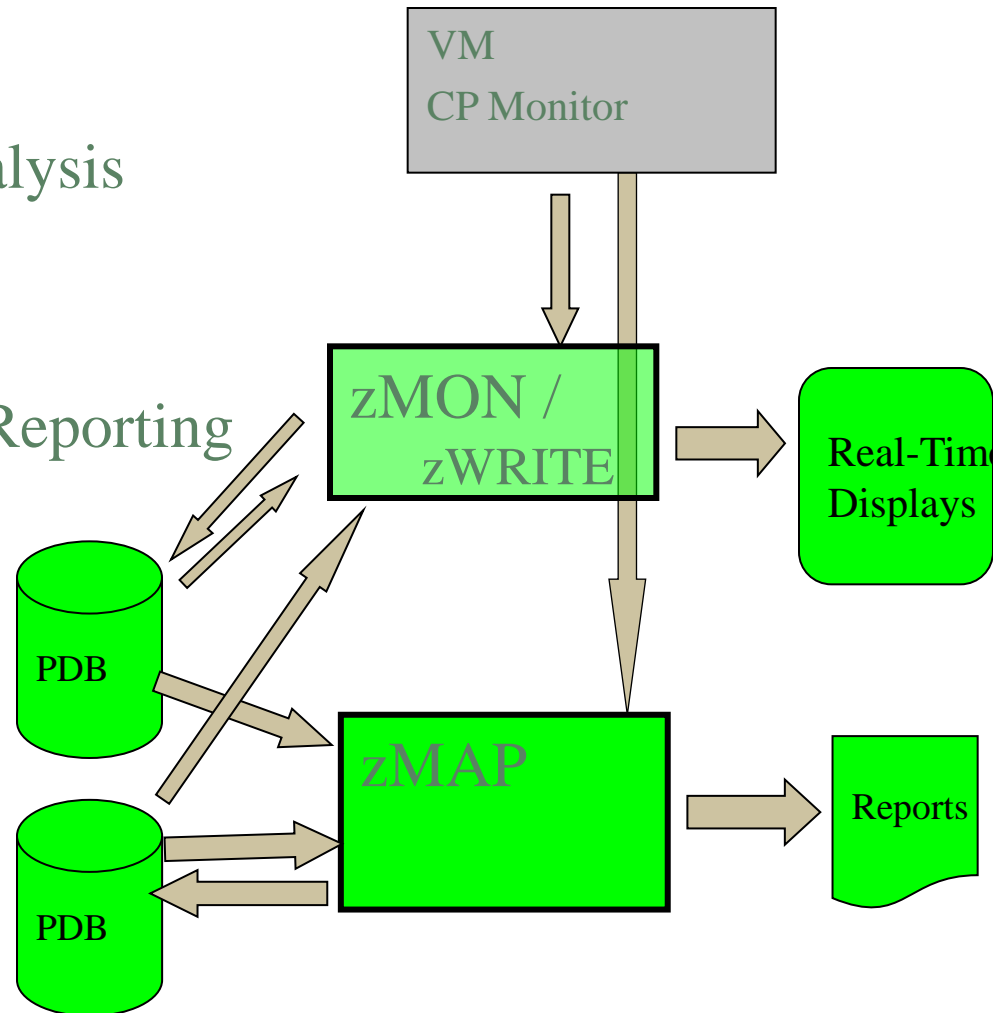

PDB or monwrite data input

PDB (Performance DataBase)

Complete data

By Minute, hour, day

Monthly/Yearly Archive

zMAP Performance Data Base

History data format – long term

- All history in “daily” files, yyymmdd

zMAP, EXTRACT Formats

- ESAMAP yyymmdd
- ESAMAP (WEEK 51
- ESAMAP (MONTH 12
- Same for ESAEXTR

Performance Database “EXTRACT”

- **Performance database language:**
 - ESAEXTR – ZMAP feature
 - HISTORY KEYWORDS – describes variable names (~4000 metrics)
- **ESAEXTR Functions**
 - ESAEXTR filetype* (PARM ucdsys CSV
 - Filetype is history type, as in 201706* for “june, 2017”
 - CSV produces CSV format vs column aligned
- **ESAEXTR Statements**
 - EXTRACT:
 - x = 'NODE'
 - y = 'UCDSYS.REALSIZE'
 - y = 'UCDSYS.BUFFER'
 - y = 'UCDSYS.CACHE'
 - y = 'UCDSYS.REALSIZE-UCDSYS.REALAVAIL-UCDSYS.BUFFER-UCDSYS.CACHE' ; anonymous
 - y = 'UCDSYS.SWAPSIZE-UCDSYS.SWAPAVAIL'
 - y = 'UCDSYS.CMM'
 - **criteria = NODE = LNXD01*** ; wild card
 - TITLE = 'Linux Storage Analysis'
 - TITLE = '*Label Available Buffer Cache Anonymous'

Capacity Planning “planning”

- **Monitor data very large**
 - Process it real time, extract information, discard the data
 - All classification and collection done before discard
- **Classification functions**
 - User classes – defined by installation, some predefined
 - “Key users”, class 0 is special
 - DASD and non-DASD Control Units
- **USERCLASS statements**
 - nuserclass = 20
 - class_size = 140
 - nclasses = 1

 - Userclass(03,000) = 'ZVPS '
 - Userclass(03,007) = 'ZMAP'
 - Userclass(03,008) = 'ZMON'
 - Userclass(03,009) = 'ZWRITE'
 - Userclass(03,010) = 'ZSERVE'
 - Userclass(03,011) = 'ZTCP'
 - Userclass(03,016) = 'ZTCP'
 - Userclass(03,017) = 'ZWEB*'

Benefits of Architecture – day one support

- z/VM new releases supported day 1 (Note stg size)**

Report: ESASTR1

Add "Enterprise" Support

Capacity Planning
Chargeback
Operations

Linux Management Requirements

- **Linux (and networks) adds requirement**
 - **Correct data (bad assumption)**
 - **Complete data (very difficult)**
 - **Low cost data (extremely difficult)**
- **Support requirements:**
 - SLES 7,8,9,10, 11, 12 (Installations still have 7 and 8)
 - RHEL 3,4,5, 6,7
 - UBUNTU, KVM
 - Other platforms (VSE, VMWare, SUN, P, **MicroSoft**)
- **Must support:**
 - Performance tuning (one minute granularity)
 - Capacity planning (15 minute granularity)
 - Operational alerts (one minute granularity)
 - Chargeback/Accounting (15 minute granularity)

Instrumentation Considerations

- **Operational cost of agents**

- Does your agent use 2%? 5%? 95%? of a processor per Linux server?
- Does this matter on distributed servers where agents were created?
- Will local data collection fill up your file system?
- Does turning off performance monitoring solve the performance problem?
- Do you only turn on your agent when you have a problem???
- Diagnostics vs Performance Management?
- **Customer quote: an agent that costs 1% of a processor will cost me 10 IFLs**
- **(standard snmp host mib, about 1%, VSI mib .1%)**

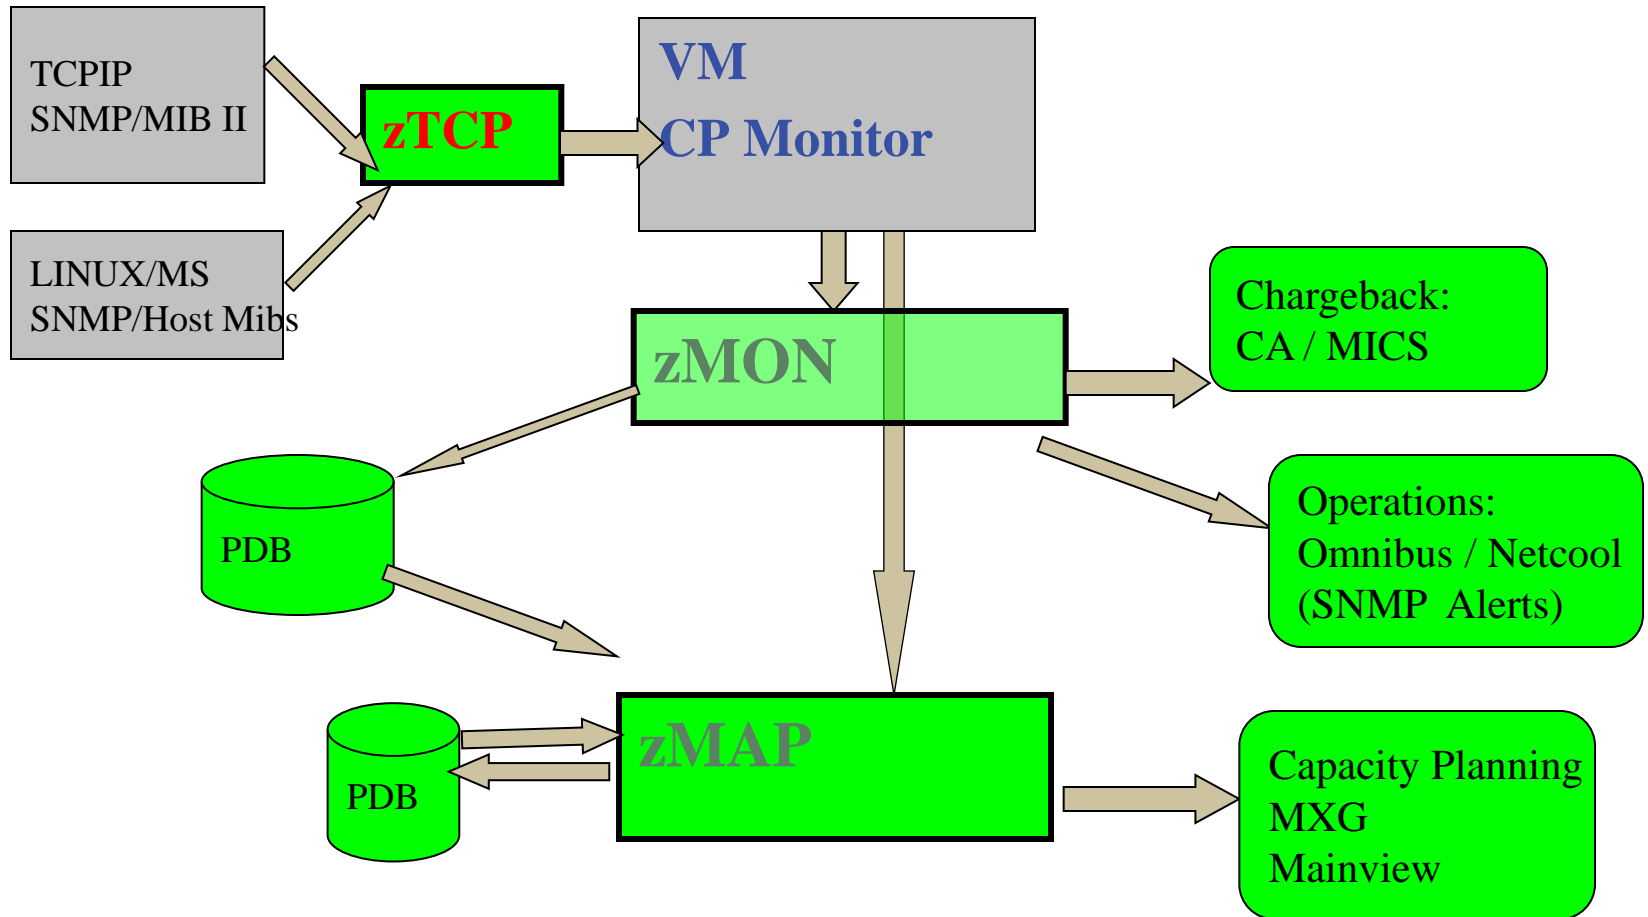

- **Agents must provide correct data**

- Is your data correct? Or wrong by order of magnitude?
- Prior to SLES10/RHEL5, all “Virtual” agents provide wrong data
- **Why collect bad data?**

Network, Linux Instrumentation

- **Performance Data infrastructure existed (zMON/zMAP)**
 - PDB already existed for performance analysis and Capacity Planning
 - Data presentation tools existed
- **Data source needed for Linux and Network:**
 - Passive agent (do not measure idle servers)
 - **Low overhead (want to monitor 100 / 1000 servers under z/VM)**
 - **Agents developed for Intel and Distributed servers did not care about overhead**
 - Open Source (fast development time), instrumentation **MUST** be part of the platform
 - Standard interface
- **SNMP: Standard interface for network and host data**
 - Provided by TCPIP Vendor
 - **Not proprietary agent! – Can't charge for it....**
 - Used to collect network, host data from NT, SUN, HP
 - NETSNMP available for Linux - Meets all requirements
 - (Distributed with RHEL 3,4,5 SLES 7,8,9,10,11)
 - **Platform independent (Intel, P-series, Microsoft, Linux)**
 - **.03% of ONE IFL (z10,sles9) per server, ONE MINUTE COLLECTION**

Add "Network" and "host" Support – Pre Linux

Full Network Monitor

MibII: Transport layer (ESATCP1), IP layer(ESATCP2),
hardware layer (ESATCP4), icmp (ESATCP3)

 Real storage
 Swap storage
 “cache”

Swapping is “good”

If not swapping,
 reduce vm size
 Use CMM to reduce

Snmp, Velocity Software mib

- **Standard mib**

- MIB II: 1.3.6.1.2.1 (Network)
- HOST 1.3.6.1.2.1.25 (process, file system device, memory)

- **Private mibs:**

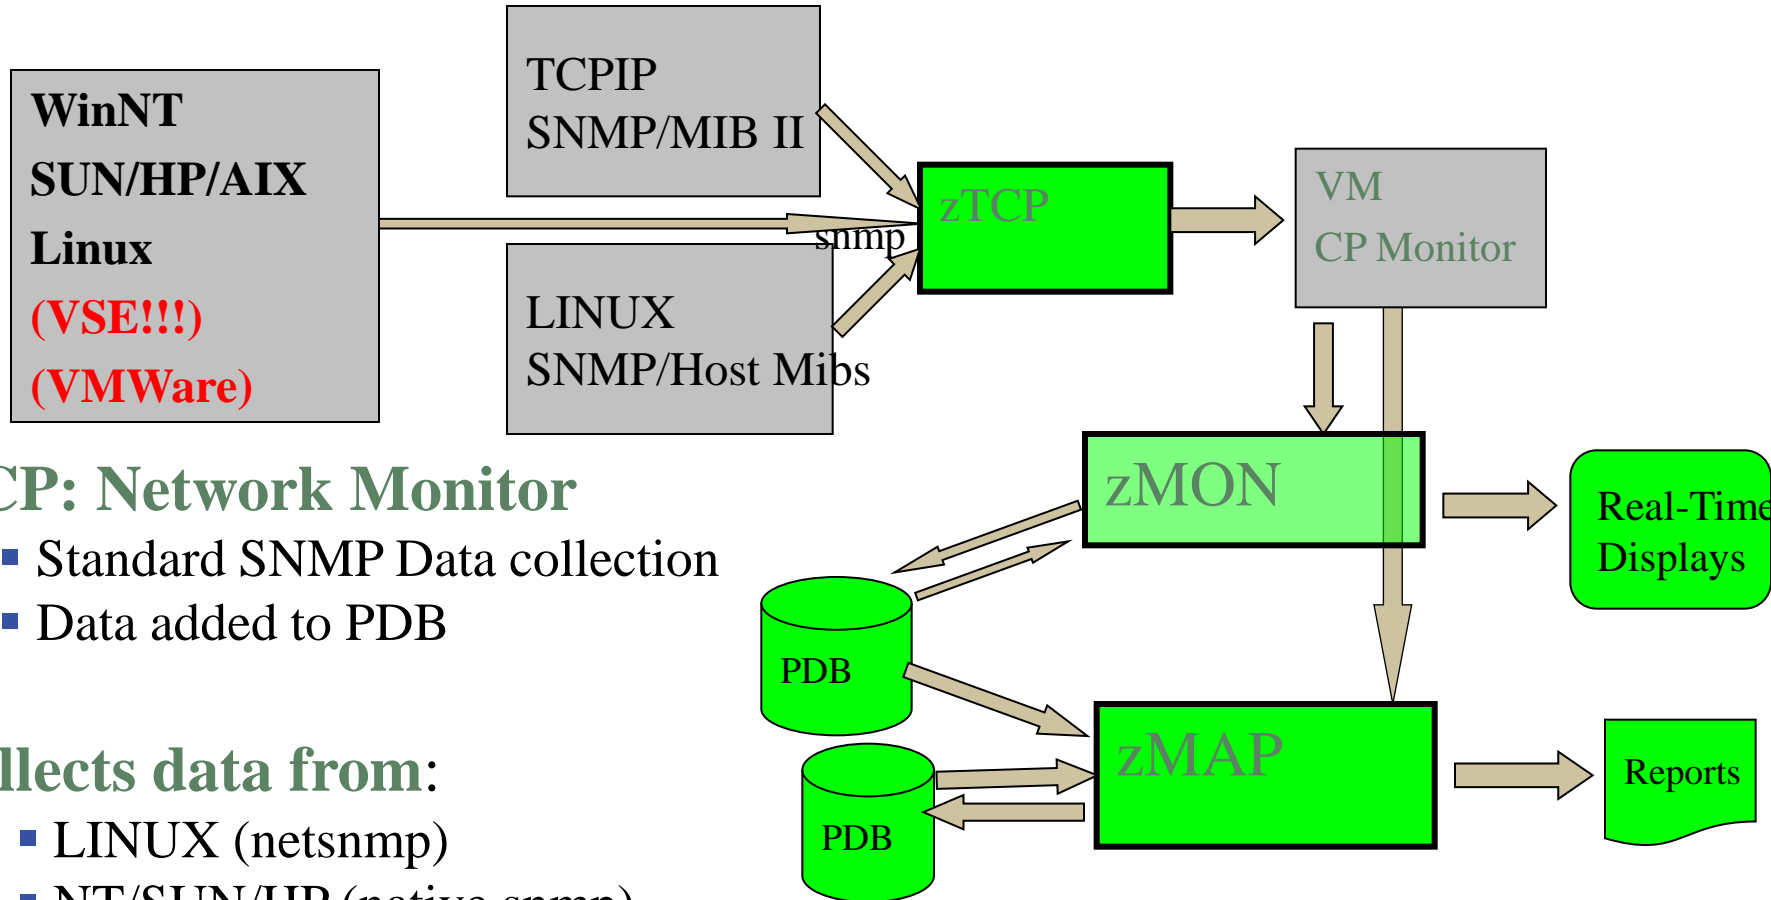

- Private: 1.3.6.1.4
- **ucd-snmp 1.3.6.1.4.1.2021.**
- **Velocity 1.3.6.1.4.1.F971**
- **VeloJava 1.3.6.1.4.1.F971.100.**
- **VeloOracle 1.3.6.1.4.1.F971.11**
- **VeloVSE 1.3.6.1.4.1.F971.10.1**

- **IBM 1.3.6.1.4.1.2**
- **IBMVSE 1.3.6.1.4.1.2.6.81FD**

- **Why Velocity mib?**

- Performance management

Snmp today....

zTCP: Network Monitor

- Standard SNMP Data collection
- Data added to PDB

Collects data from:

- LINUX (netsnmp)
- NT/SUN/HP (native snmp)
- Printers/Routers....
- **THOUSANDS OF SERVERS?**

Operational Support - SNMP Alerts

Issue with SNMP alerts

- How many control points? (one per server?)
- How many configuration files? (one plus per server?)

ZVPS SNMP Alert Architecture

- Centralized alert
- One point of control (ZALERT)

SNMP alerts sent to any SNMP operations console

- Create “SNMP TRAPDEST” file
 - * this file is the list of snmp trap destinations
 - * format is ip address, and community name
- ```
67.100.74.25 velocity
```

## Sending SNMP alerts by other functions:

```
/* authorized user can send alerts */
parse arg msg
'CP MSG ZTCP ALERT' msg
```

# Benefit of using standard interface?

- z/VM new releases supported day 1 (Note stg size)

Report: ESAUCD2

PROVEN PERFORMANCE

# Correct Linux Performance Data?

- **Valid and Correct?**

- **Process data from Linux under z/VM is wrong**
  - All process accounting based on timer ticks
  - Corrected in SLES10, RHEL5 (now underreports)
- TOP, ALL other agents “lie” when under z/VM
- Sample wrong by factor of 10-100 prior to SLES10
  - Well known issue since 2001
  - [HTTP://velocitysoftware.com/present/CaseAFS](http://velocitysoftware.com/present/CaseAFS)
  - Mostly corrected by “steal timer”

- **Leads to solving performance problems?**

- z/VM owns the shared resources
- **“Native” tools will not detect many problems**
- **“performance was unexplainably bad so we abandoned the project”**
- Skills, experience and Education help...

# Modernize: Webserving, performance skills

**ZVWS** Provides www access

**zTUNE**: Rules based analysis

- Many installations lack z/VM and Linux on z/VM tuning skills
- Velocity Software's objective is to ensure our customer performance problems are resolved – quickly.
- zTUNE includes configuration guidance, health checks when ever installation requests, and assistance in all areas of Linux on z/VM and z/VM performance
- no more **“performance was unexplainably bad so we abandoned the project”**

# Health Checker for z/VM, Linux: zTUNE

- Focus more now on simplifying problem resolution
- User reports that applications complained about zLinux / WAS performance:

```
Report: ESATUNE Tuning Recommendation Report
Monitor initialized: on 2084 serial 9ABED

```

```
The following changes are suggestions by Velocity Software
to enhance performance of this system.
```

```
However, Velocity Software takes no responsibility -
all tuning is the responsibility of the installations.
Please call 650-964-8867 if you have any questions about
these values, or suggestions on report enhancements.
```

```
USR2 User LINUX160 is paging excessively (75.0 per second)
This user can be protected using SET RESERVED
```

```
SPL5 Spool utilization is 100% full.
Perform Spool file analysis and purge large
spool files, or force users currently writing
excessively to spool.
```

```
*****zTUNE Evaluation *****
```

```
XAC1 User total PROCESSOR WAIT excessive at 33 percent.
Current reporting threshold set to 20.
This is percent of inqueue time waiting for
specific (PROCESSOR)resources to become available.
```

```
LPR3 LPAR share is too low, causing USER CPU Wait
VM LPAR allocated share: 0.94 percent of total
VM LPAR used 389 percent of allocated share
```

# zVPS Version 4, Release 1 (January 2012)

- **Performance Management**

- VMWare (node grouping)
- Mixed mode capacity planning (IFL vs CP)
- Linux DISK reporting (ESAUCDD)
- Granularity in virtual cpu reporting (ESAUSCP, ESALNXS)
- VSE Initial support (ESAVSES, ESAVSEC)
- LGR support
- zVIEW V2
- zALERT

- **Operational support**

- Global Installer
- Portal

- **Other**

- z/VM 5.4 support, up to 96 CPUs per LPAR, 200 physical CPUs / CEC
- Framework for future products and enhancements
- **Customer enhancement requests - MANY**

# zVPS Version 4, Release 2 (January 2015)

- **Performance Management**

- **Application support** (JAVA, Oracle)
- VSE partition support, job support (ESAVSEP)
- Linux process metrics for RAM, I/O, Swap (ESALNXP, ESALNXI)
- Linux system metrics for ram (ESALNXR)
- **MFC Support** for z114, z196, EC12/BC12, Z13/Z13S
- CP Pooling support
- LINMON support
- APPLE sever support (decimal process ID up to 99,999)

- **Operational support**

- Recognize lpar, vmid for linux servers, LGR support
- Peer to peer support
- SNMP V3

- **Other**

- z/VM 6.2, z/VM 6.3 Support

# zVPS Version 4, Release 3 (January 2017)

- **Performance Management**

- Java Thread support (ESAJVMT)
- HiperPav Support (ESAHPP)
- SMT Support (ESASMT, ESAUSR5)
- Diagnose support (ESADIAG)
- OSA Support (ESAOSA)

- **Operational support**

- Move linux nodes to correct LPAR (requires VSI mib) (ESALNXV)
- DNS Support for zTCP

- **Other**

- z/VM 6.4 support
- **Many “small” Customer enhancement requests**

# zVPS Version 4, Release 3.3 (April 2018)

- **Performance Management**
  - User Diagnose support (ESAUSRD)
- **Operational support**
  - Enterprise server inventory
  - UBUNTU Support with snmpv3
  - Class C subnet node discovery
- **Other**
  - Z14 Support (model numbers, MFC)
  - Specter apar / status recognition

- **Added DNS Names capability**

```
community = 'velocity' TCPIP='TCPIP' nodegrp = 'VSILPARs'
```

```
dnsport = 53
```

```
dnsIPADDR = '64.105.172.26'
```

```
node = 'VSIVM1' domain='vsivm1.VelocitySoftware.com'
```

```
node = 'VSIVM2' domain='vsivm2.VelocitySoftware.com'
```

```
node = 'VSIVM3' domain='vsivm3.VelocitySoftware.com'
```

```
node = 'VSIVM4' domain='demo.VelocitySoftware.com'
```

- **Added SSI Support - monitor where operating**

```
TCPIP='TCPIP' peerport = 1998
```

```
peeraddr = '67.218.99.132' peerport = 1998 ;vsivm2
```

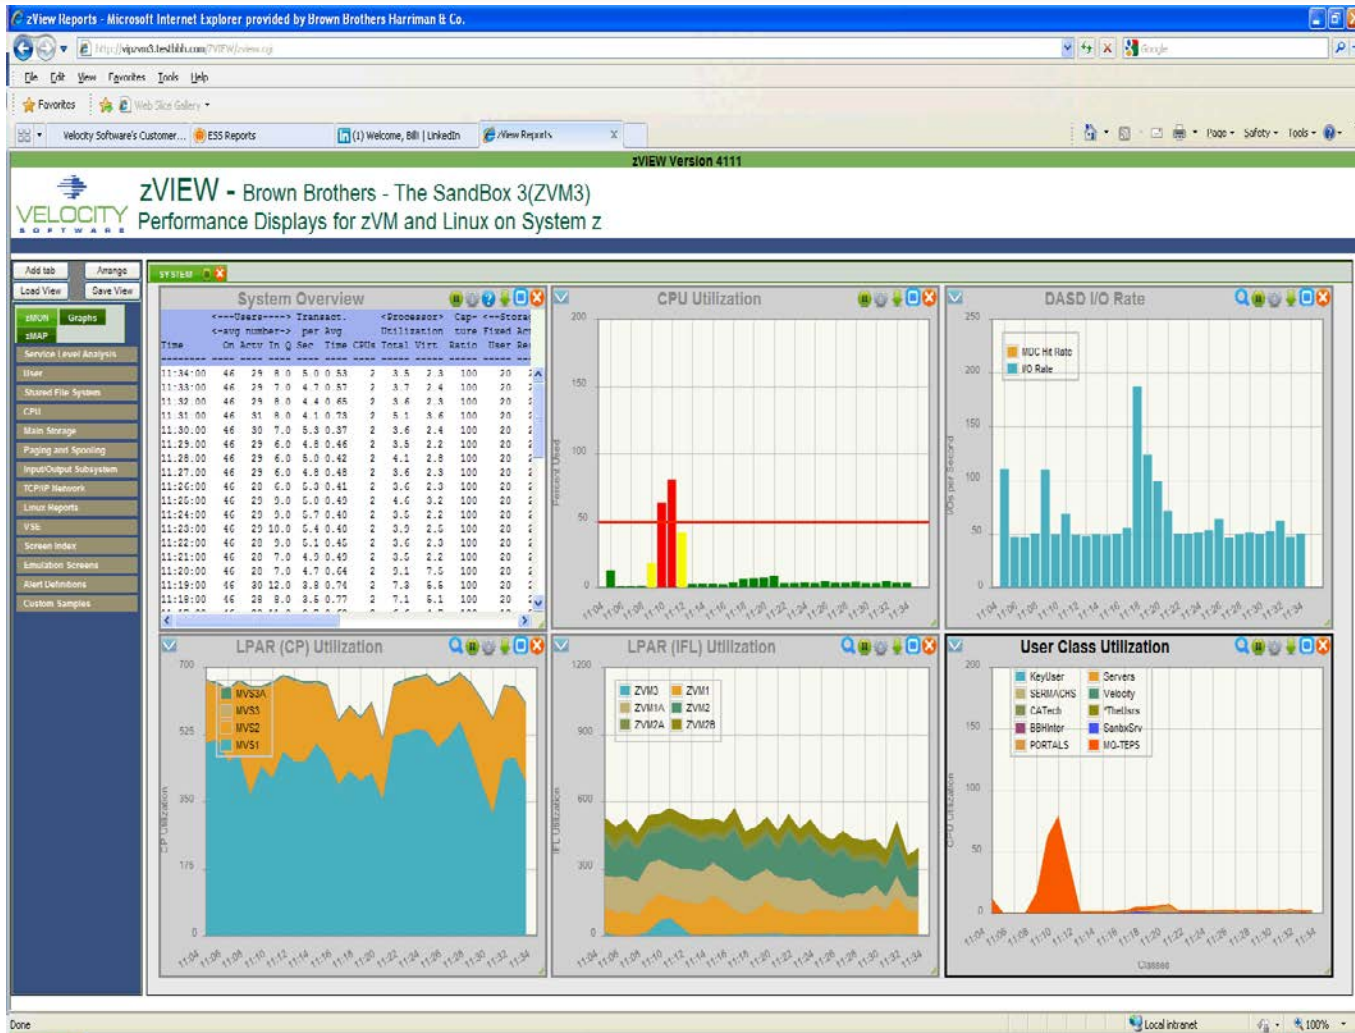

```
peeraddr = '67.218.99.134' peerport = 1998 ;vsivm4
```

```
peeraddr = '67.218.99.135' peerport = 1998 ;vsivm5
```

```
Ssiflag = '1'b
```

```
Node = 'lnxssl' domain='prod.mylinux.mycompany.com'
```

# zVIEW Version 2 Example

## Tailorable, expandable, zoomable

Today is Monday 2 Dec 2013 zVIEW Version 4159

**VELOCITY SOFTWARE** **zVIEW**  
Enterprise View - Velocity Software - VSIVM4 (DEMO)

**First level**

# ZMON Drill down Options

The screenshot shows the ZMON interface with a sidebar on the left and a main window displaying a 'User Storage Analysis' table. The sidebar has buttons for 'zMON', 'zMAP', 'System', 'Service Level Analysis', and 'User'. The 'User' section is expanded, showing a list of users including ESAUSR1 through ESAUSPG. The main window shows a table with columns for Time, UserID / Class, Total, >2GB, <2GB, Xstor, DASD, Xstor, Disk, and Migs. The table is titled 'User Storage Analysis' and has a subtitle '<---Storage occupancy in pages---> <---Main Storage pa...>'. The table data is as follows:

| Time     | UserID /Class | Total  | >2GB   | <2GB   | Xstor  | DASD   | Xstor | Disk | Migs |
|----------|---------------|--------|--------|--------|--------|--------|-------|------|------|

Oracle data available 4.2

# Multiple System View (3 LPARs - 2012)

Oracle data from multiple lpar's visible on one tab

# zMAP Capacity/Trend Graphs

# zALERT - Operational Support

- **Alerts**
  - User tailorable
  - 3270 based, web based, and / or SNMP
  - Alerts can be set on any variable or calculated variable
- **Linux alert examples:**
  - Disk full
  - Missing processes (requires complete data)
  - **Looping processes (requires correct data)**
- **z/VM alert examples**
  - Page/spool space full (avoid abends)
  - Looping servers
  - DASD service times
- **Network alert examples**
  - Transport errors
  - ICMP rates
  - Bandwidth thresholds

# zALERT – Automate problem detection

## 3270 Style Alerts (50+ sample alerts provided)

```
Screen: LINALERT Velocity Software 25 Mar 2015 06:42:29
----- Exceptions Analysis Alerts -----
Type Description
LNDX / area on oracle is 79.51% full
LNDX /opt area on oracle is 82.24% full
LNDX /home area on oracle is 59.02% full
LNDX / area on RH5X161 is 32.54% full
LNDX / area on S11R20RA is 81.56% full
LNDX /boot area on S11R20RA is 2
LNDX /opt area on S11R20RA is 95
LNDX /mnt/oracle area on S11R20RA is 2
LNSU Swap utilization for Linux

# zOPERATOR

## Several requests to extend ESAOPER screen

### zOPERATOR:

- Optional **no-charge** application component of zMON
- Uses standard zMON 3270 screen driver, existing function
- Scrollable 3270 console
- Messages can be searched by text, date or time
- All messages logged in daily files
- Actions can be set based on messages received
- Can be viewed from DIALed terminal or **zVIEW (WEB!)**

# zOPERATOR – Management Console

## Operator Function browser based

- Click Thru for problem analysis – LPCP example

# Console Management View

Performance | zVWS administration | zTCP administration | zVPS administration

## Available zVPS Console Logs

## What do customers want?

- TCPIP?
- VSAM?
- CICS?
- DB2
- High Capture ratio?

# Linux VCPU Analysis

## ESAUSCP – VCPU Analysis, linux needs new mib

- DB2 workload has very strange overhead....

Report: ESAUSCP **Virtual Machine** VCPU Analysis

```

# zVPS Version 4.2 (December 2015)

- **Linux Performance Management**

- Oracle
- Java
- Longer process names/paths
- System real storage metrics
- Process metrics
- 32 bit process IDs (Apple server processes go to 99,999)

- **z/VM Performance Management**

- 6.3 Exploitation (ESAMFC, Diagnose rates)
- Storage report,
- zOPERATOR
- PORTAL V2

# Linux Storage Analysis

## ESAUCD2 – The most useful storage report available

- Note, page tables are “anonymous / overhead”

# Process Storage metrics (zVPS version 4.2)

## New metrics

- RSS, Size - Same
- Locked: Locked memory size (mlock)
- Peak: peak RSS (high water mark)
- Data: size of data, stack
- **PTBL: page table entries (linux 2.6.10) - Use to evaluate LARGE PAGES**
- EXEC: size of executable (text)
- Lib: shared library code size
- **Swap: Swapped out**
- Stack: size of stack

# zVPS Application Management

- Requirement to go beyond z/VM and Linux metrics
- z/VPS provides over 4,000 unique metrics
  - z/VM System, storage, paging, dasd metrics (3,000)
  - z/VM Virtual machine metrics (~400)
  - Network metrics (~100)
  - Linux System metrics (~250 VSI, 80 HST, 80 UCD)
  - Linux Process metrics (~40)
- **Application subsystem users:**
  - **Oracle (70 metrics), supports (10G, 11G, 12C)**
  - **Websphere (30 metrics)**
- **Most application “monitors” are diagnostic tools, not management tools**

# Linux Capacity Planning “planning”

- **Node Classes (installation defined)**
  - By application (capacity planning)
  - By VMWare/ESX box
  - By department (chargeback)
- **Other grouping (automatic)**
  - Process by user (ESALNXU)
  - Process by process name (ESAHSTA)
  - Process by application (ESALNXA)
    - Requires Parent/Child relationship
  - Disk storage by NODE class
- **Define alerts (Operational support)**
  - based on application
  - Based on node group
  - Based on linux user

# z13 Architecture

Question, If 10,000 dispatch / second / cpu, impact?

## **New technologies**

- **Docker**
- **SPLUNK**
- **Oracle**
- **MQ**
- **DB2**

## **Enhancements**

- **Enterprise view – Applications**
- **Extend X-Enterprise (SSI) support**

## **Open Mainframe Project**

- **Openstack**

# zVPS Measurement Summary

- **zVPS Meets Performance Management Requirements:**
  - Sufficient for performance, capacity planning, accounting, Operations
  - Linux and z/VM data – Integrated
  - Complete and correct data
- **zVPS Meets Infrastructural requirements**
  - Support all releases (SLES7,8,9,10,11 RHEL 3,4,5,6 z/VM V3,4,5,6,7 ...)
  - Standard interfaces
  - Low resource requirements
- **zVPS References (many):**
  - Many installations instrument hundreds of servers today on single LPARs
- **zTUNE (Health Check for z/VM, Linux)**
  - zTUNE <http://velocitysoftware.com/products.html>
- **Performance Education:**
  - Performance education, see: “<http://velocitysoftware.com/workshop.html>”
