

Performance Analysis Flowchart

“z” is:

- Very large,
- Very complex and
- Very well instrumented

The challenge?

- **What challenge, it is all there!**
 - 200 zmon panels (with menus)
 - 150 zmap reports (with table of contents)
 - 3400 unique variables

Very few companies support full time performance analysts.

The challenge:

- Performance problems are visible,
- “z” applications are often impacted by other applications

My challenge

- Provide a flowchart to resolve problems quickly
- Describe the few panels/reports needed to solve any specific problem

This flowchart is based on decades of analysis

The Challenge z/VM serves many functions (162 reports)

Analysis starts with “is there a problem?”

- Describe the problem (what user(s), what time)

System Configuration

- Processor model, cpu type
- Number of processors, storage size
- SMT support

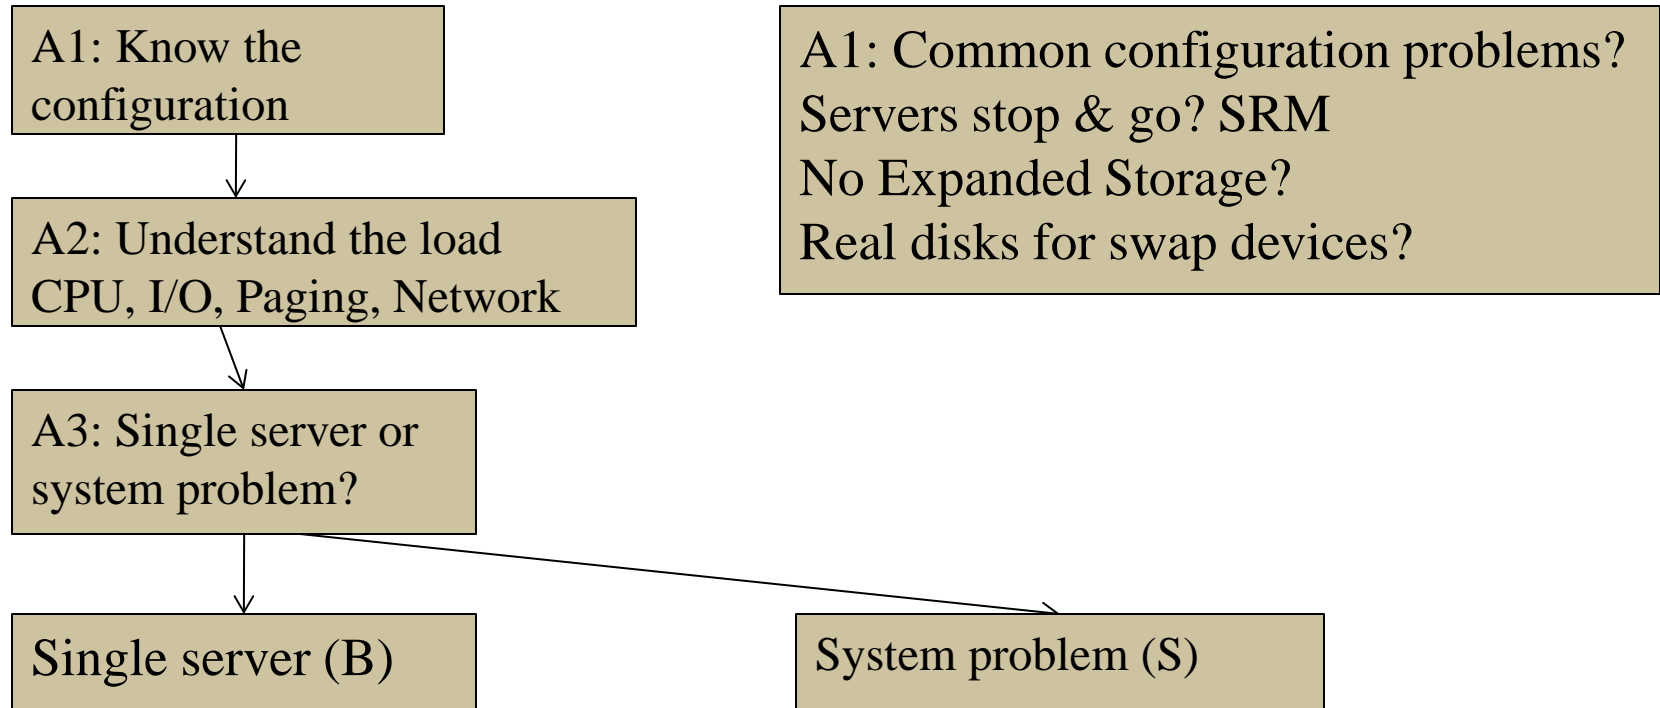

Loads on the system subsystems

Wait states for those impacted

Subsystem Analysis

- DASD, Storage, Paging, Processor, Network

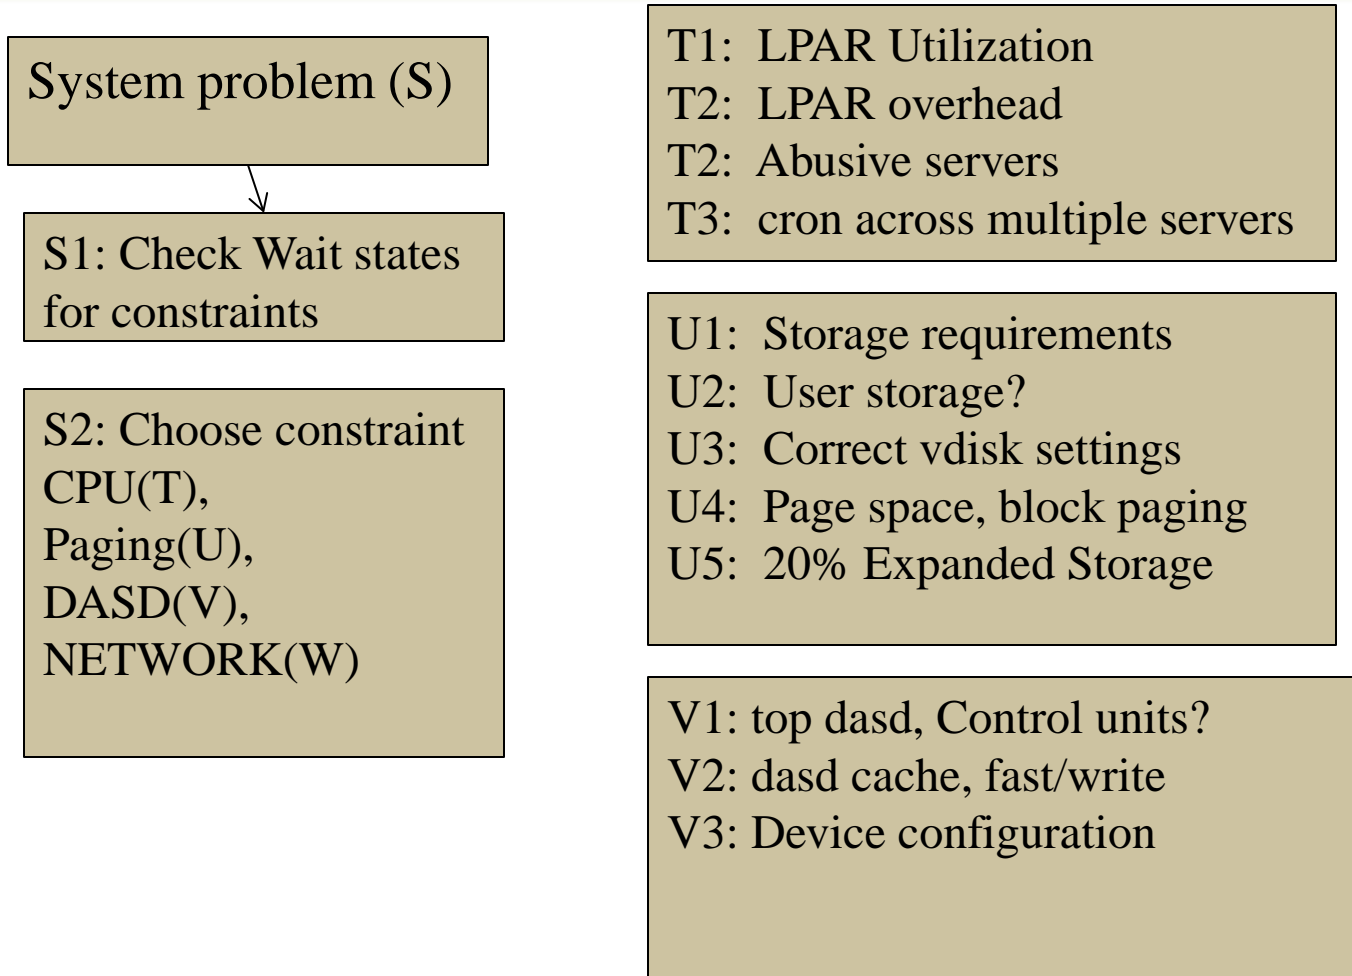

The Analysis Flow Chart

```

Look for Spikes, dramatic changes, what time?

- Processor
- Storage for users
- Page rates
- DASD I/O rates
- (Transactions are for traditional workloads)

Wait states provide options for improvement

- Sample user status once per second, once per minute
- (900 samples per vcpu per 15 minute period)

Wait state (queue) analysis -> where to focus

- Running / CPU Wait -> CPU Subsystem
- Simulation wait (master processor) -> CPU Subsystem
- Page wait -> Paging/Storage subsystems
- Asynchronous i/o, page -> DASD subsystem
- Loading – special state, loading in working set (LDUBUF)

Normal idle wait states

- TCPIP, Linux: test idle
- Traditional servers: SVM (service machine wait)
- Traditional users: idle (not in queue)

Wait States: ESAXACT

Report: ESAXACT Transaction Delay Analysis Veloc

Look for “Interesting configurations”

- Large relative shares / absolute shares
- CPU Counts, matching shares (100 Rel / vcpu)
- CPU Type (IFL, CP)
- Virtual machine storage sizes (too large?, largest?)

Top down:

- CEC / LPAR
- LPAR / z/VM
- Virtual machine
- Linux process

CPU Capture ratio 100% down to process

LPAR Configuration: ESALPARS

Report: ESALPARS Logical Partition Summary Velocity Software Corporate
 Monitor initialized: 04/15/11 at 10:00:00 on 2097 serial 72655 First record analyzed: 04/1

Block Paging Analysis

- Block page read – optimal 10 pages
- Steal should be zero prior to 6.3
- Migrate should be zero with 6.3 and beyond
- Pages stolen, unreferenced – Storage stress
- Single page read – goes up with 6.3

Paging Analysis: ESABLKP

Report: ESABLKP		Block Paging Analysis							TEST MAP						
Time	<----Load---->	<-Users->	Tran	Serv	<-Block->	<-Blocks Formed By->	Block	<--Block Exceptions/sec-->	<Single Read>	<No Refers>					
	Actv	In	Q	Time	<-Reads->	<-Steal->	<Migrate>	Fault	User	System	Migr	Steal

Block Paging Analysis for 6.3+

- Block page read – optimal 5 pages??
- Migrate should be zero (No expanded storage)
- Pages stolen, unreferenced – zero with 6.3
- Single page read – goes up with 6.3
- Faster paging devices? (new market for SSD)
